# A History of the Combinatorial Potlatches 

Brian Alspach Robert A. Beezer

September 18, 2017

This is a brief history of the Combinatorial Potlatches and their speakers. It was maintained by Brian Alspach (BA) through November 2001, then by Robert Beezer (RAB) through the 2016 edition. Send additions, clarifications and corrections to Amites Sarkar, amites.sarkar@wwu.edu. Copyright 2002-2017, Licensed with a Creative Commons BY-SA License.

1. Combinatorial Potlatch One, 27 February 1982, University of Washington

Branko Grünbaum Edge-transitive planar graphs
C. C. Lindner How to embed a partial Steiner triple system
2. Combinatorial Potlatch Two, 27 November 1982, Simon Fraser University

Bill Kantor Algorithms for graph isomorphism and other group theoretic problems
Peter Kleinschmidt Properties of simplicial complexes and Hilbert functions
3. Combinatorial Potlatch Three

BA: I have no record, but I believe this was our first visit to Western Washington University.
4. Combinatorial Potlatch Four, 19 November 1983, University of Washington

Geoffrey Shephard The theory of fabrics
Richard Weiss Some aspects of graph theory in the classification of finite simple groups
5. Combinatorial Potlatch Five, 19 May 1984, Simon Fraser University

Richard Weiss Some aspects of graph theory in the classification of finite simple groups
Egan Schulte $A$ combinatorial theory of regular polytopes
BA: At this point we have lost track of the numerical sequence, but perhaps we can reconstruct the other meetings.

## 6. 1 December 1984, Western Washington University <br> Peter Cameron <br> Random sum-free sets and cyclic automorphisms

Tudor Zamfirescu
Most stars are thin, most thick stars are not smooth
7. 14 December 1985, University of Washington

Richard Nowakowski
Pursuit and search games on graphs
Brian Alspach
Orthogonal factorizations of graphs
8. 5 April 1986, Western Washington University

Moshe Rosenfeld
Data allocation problem: Or how to divide a square into rectangles
Dave Kirkpatrick
Algorithms for finding maximal vectors
9. 13 December 1986, University of British Columbia

Bojan Mohar
Embeddings of infinite graphs
Peter Gritzman
Finite packing and covering
10. 9 May 1987, Pacific Lutheran University

Stan Wagon
Fourteen different (?) proofs of a result about tiling a rectangle
Don Chakerian
How to fit an elephant into a small cube
11. 28 November 1987, Simon Fraser University
J.-C. Bermond

DeBruijn-Kautz networks
H. S. Wilf

The exponential formula: Combinatorics' best kept secret
12. 9 December 1989, University of Washington

Joan P. Hutchinson
When does a graph contain a spanning tree with no vertex of degree 2? (And why would you want
to know this?)
Charles J. Colburn
Intersections and supports of designs
13. 12 January 1991, Simon Fraser University
C.C. Chen, National University of Singapore

Marni Mishna, Simon Fraser University
The Remarkable Ubiquity of Standard Young Tableaux of Bounded Height
BA: You will note that Richard Weiss is listed as giving the same talk at two consecutive Potlatches. I vaguely recall that Richard had to cancel his appearance for the first of the two listed so that I think the later listing is correct. I undoubtedly have an early announcement in my files. It is certainly the case that he talked only once.
